ABSTRACT

JC17 Rec'd PCT/PTO 03 JUN 2005

The invention relates to single- or double-sided anti-static self-adhesive strip, made from a support material with an electrically-conducting primer and a self-adhesive material layer, a supporting material, an electrically-conducting primer and two self-adhesive material layers or a support material, two electrically-conducting primers and two self-adhesive layers. The electrically conducting layer can comprise electrically-conducting particles, preferably made from metal, electrically-doped materials, or electrically-conducting polymers.
